

JOHN BORGES

Principal Frontend Engineer | UI Architecture | Technical Leadership

Remote, US (Pacific Time) • johncborges@gmail.com • johncborges.com • linkedin.com/in/johnborges

SUMMARY

Principal Frontend Engineer with 20+ years of experience architecting and delivering enterprise web applications, most recently as Technical Lead for a 3–12 engineer frontend team at Extreme Networks. Deep expertise in Angular, JavaScript/TypeScript, and frontend architecture, paired with strong engineering-process ownership: test automation, code-quality tooling, CI checks, and code standards. A background in fine arts sharpens a strong eye for pixel-perfect UI craft and user experience. Experienced people leader — technical interviewing, mentoring, onboarding, and performance management — with hands-on use of AI-assisted development tools (GitHub Copilot, Claude Code). Seeking a fully remote Principal/Staff frontend role.

CORE SKILLS

Frontend: Angular, TypeScript/Javascript, HTML5, CSS, Aurelia, Dojo, Lit/Web Components, Storybook, React

Design & UX: Pixel-perfect UI craft, visual/interaction design sense (background in sculpture, design, and photography)

Quality & Tooling: Jest, Intern, Selenium, Python, Robot Framework, ESLint, Stylelint, Prettier, GitHub Actions/checks, Git, JIRA, TeamCity

AI-Assisted Development: GitHub Copilot, Claude Code; self-directed study with local/offline AI tooling (Foundry Local)

Backend & Data (prior experience): C#, .NET/ASP.NET, Node.js, PHP, SQL Server, Oracle, MySQL

Leadership: Technical leadership of 3–12 engineers, technical interviewing, onboarding, mentoring, performance feedback, code review, sprint/meeting facilitation

EXPERIENCE

Principal Frontend Engineer — Extreme Networks

Oct 2018 – Jul 2026

Milpitas / Pleasanton, CA • joined via Extreme Networks' acquisition of Aerohive Networks (2019)

- Served as Technical Lead for a frontend engineering team of 3–12 engineers, guiding UI architecture direction (including a micro frontend architecture) for ExtremeCloud IQ / Extreme Platform ONE, Extreme's unified cloud network operations platform, mentoring developers and coordinating cross-team initiatives on Angular and Dojo.
- Modernized the legacy Dojo UI after joining Aerohive: replaced a monolithic, spaghetti-style codebase with an MVVM architecture, built unit testing from scratch with Intern (95%+ coverage), delivered a more modern look and faster load performance, and standardized the code to eliminate chronic merge conflicts.
- When the UI moved to Angular, led my team's portion of the incremental, module-by-module migration — owning several modules while maintaining a biweekly release cadence, including ongoing bug fixes — one of several teams migrating different areas as ExtremeCloud IQ evolved into Extreme Platform ONE; largely completed with some legacy pieces remaining.
- Built unit testing for the 1,000,000+ line Angular codebase from scratch using Jest, reaching 99% coverage, and standardized the codebase across the team.
- Authored custom ESLint and Stylelint plugin rules (enforcing accessibility, architectural integrity, and automation-tag conventions), rule-set configurations, and code standards for the Angular and Dojo codebases, and wrote GitHub checks to enforce code quality across the team.
- Built a shared component library using Lit (LitElement) to create framework-agnostic Web Components, published via Storybook and consumed across both Angular and React projects.
- Wrote automation test scripts (Selenium, Python, Robot Framework) used by QA to test the cloud application.
- Used GitHub Copilot and Claude Code to accelerate unit test writing and code review/refactoring work.

- Conducted technical interviews to assess candidates' engineering knowledge, providing findings to hiring managers; onboarded all new team members and mentored developers.
- Ran daily standups and weekly development meetings; participated in pre-development and project decision-making.
- Conducted extensive code review on GitHub; rated team members on quality and performance of work.
- Created metric reports, including code coverage, to track team and codebase health.
- Progressed from Frontend Software Engineer to Staff Engineer to Principal Frontend Engineer, starting at Aerohive Networks prior to its acquisition by Extreme Networks.

Senior Software Engineer — OpenText

Mar 2010 – Aug 2018

Pleasanton / San Francisco, CA • joined via OpenText's acquisition of Daegis

- Built the OpenText AppWorks web UI using Aurelia, Node.js, HTML5, CSS, JavaScript, JSON and jQuery, including custom controls, right-to-left support, multi-language support, and keyboard navigation.
- Owned engineering for the Daegis Edge eDiscovery SaaS product: resolved a range of production issues across the codebase, conducted technical interviews and mentored developers, managed releases, ran weekly development meetings, and reviewed/tested other developers' code.
- Migrated Daegis Edge from ASP to C#, Silverlight, and WCF RIA Services, and designed/coded the majority of its client-facing UI.
- Led development of a REST API to share data between two separate systems, including project management, SQL Server schema design, security implementation, and unit testing.
- Decoupled the Daegis Edge Silverlight UI's frontend architecture to the MVVM pattern, simplifying validation, unit testing, and code maintainability.
- Architected page-load performance improvements via minification, compression, and caching of stylesheets and scripts.
- Built a WPF/C# Diff Tool for the OpenText Gupta TD Mobile IDE for native mobile app development.

Software Architect & Lead Software Engineer — Briance Creative

Jul 2008 – Jun 2012

Oakland, CA

- Architected and led a development team building websites for a handful of small businesses using PHP, JavaScript, jQuery, WordPress, Zend Framework, Doctrine ORM, and MySQL.

Earlier Career

2000 – 2010

Software Engineer, CrestPoint Solutions; .NET Consultant, Contra Costa County; Senior Application Developer, Maxim Integrated Products; Business Systems Consultant 4 / Application Developer, Wells Fargo; Application Developer / Programmer Analyst, Integrated Silicon Solution Inc. — enterprise .NET, ASP.NET, SQL Server, and Oracle application development, database design, and business systems consulting.

EDUCATION

Bachelor's Degree, Music (Composition) — Magna Cum Laude, Bethany University

Additional study in Sculpture, Design, Photography & Fine Arts — California College of the Arts
